

1 Introduction

Move all code chunks into the appendix.

2 Computing

You cannot see the source code because `echo = FALSE` was set globally.

```
## [1] 2
```

```
## [1] 4
```

```
## [1] -0.56048 -0.23018 1.55871 0.07051 0.12929 1.71506 0.46092  
## [8] -1.26506 -0.68685 -0.44566
```

A Source code

Now we show all the code chunks:

```
library(knitr)  
opts_chunk$set(echo = FALSE) # hide source code in the document  
# chunk a  
1 + 1  
# chunk b  
2 + 2  
# chunk c  
rnorm(10)
```

Of course, you can select labels to include here, e.g. remove the first chunk:

```
# chunk a  
1 + 1  
# chunk b  
2 + 2  
# chunk c  
rnorm(10)
```
