Sometimes we do not want the text following a code chunk to be indented as a paragraph. We can use the `document` hook to add `\noindent` after each chunk. For example:

```
library(knitr)
knit_hooks$set(document = function(x) {
    gsub("(\\\\end\\{knitrout\\}[\n]+)", "\\1\\\\noindent ",
        paste(x, collapse = "\n"))
})
```

See if it works.

```
# hello world
1 + 1

## [1] 2
```

I'm not indented. That is great.

A new paragraph is indented again.
