We want the file extension when including a figure into LaTeX.

```
library(knitr)
hook_plot = knit_hooks$get("plot")
knit_hooks$set(plot = function(x, options) {
    # if x is foo.pdf, make it foo.pdf.whatever so the plot hook removes
    # the extension internally
    x = paste(c(x, "whatever"), collapse = ".")
    hook_plot(x, options)
})
```

You should see \includegraphics{test.pdf} instead of \includegraphics{test}.

```
# pdf figure
plot(1)
```

```r
# png figure
plot(2)
```
