We can draw a table with the gridExtra package, and one problem is to predetermine the size of the table plot to remove the extra white margin. Below is an example that shows you how to do it (courtesy of baptiste Auguié).

```
library(grid)
library(gridExtra)
g = tableGrob(head(iris, 4))
```

```
grid.draw(g)
```

	Sepal.Length	Sepal.Width	Petal.Length	Petal.Width	Species
1	5.1	3.5	1.4	0.2	setosa
2	4.9	3.0	1.4	0.2	setosa
3	4.7	3.2	1.3	0.2	setosa
4	4.6	3.1	1.5	0.2	setosa
