This is an example showing you how to convert PDF figures generated by tikz to PNG via ImageMagick:

The plot in this chunk is converted to PNG:

```
(x = rnorm(20))
```

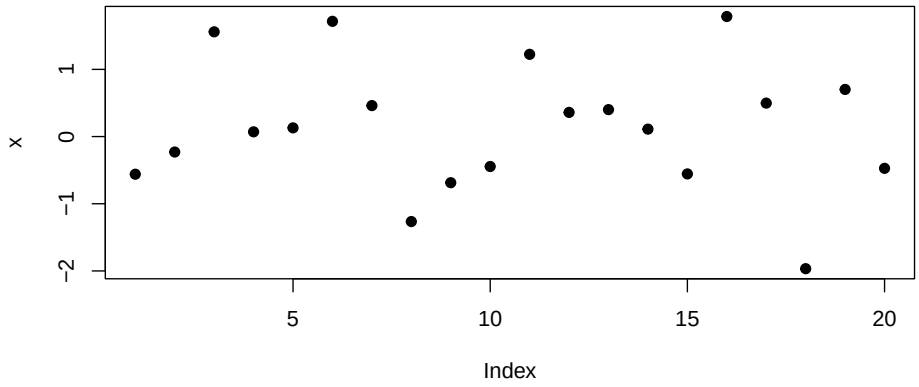

```
##  [1] -0.56048 -0.23018  1.55871  0.07051  0.12929  1.71506
##  [7]  0.46092 -1.26506 -0.68685 -0.44566  1.22408  0.35981
## [13]  0.40077  0.11068 -0.55584  1.78691  0.49785 -1.96662
## [19]  0.70136 -0.47279
```

```
par(mar = c(4.5, 4, 0.1, 0.1))
hist(x, main = "", xlab = "$x$ (how the fonts look like here?)",
    ylab = "$\\hat{f}(x) = \\frac{1}{nh}\\sum_{i=1}^n \\cdots$")
```

This chunk uses the PDF device, and it is not converted:

```
par(mar = c(4.5, 4, 0.1, 0.1))
plot(x, pch = 19)
```
