1 Introduction

Move all code chunks into the appendix.

2 Computing

You cannot see the source code because echo = FALSE was set globally.

```
## [1] 2
```

```
## [1] 4
```

```
##  [1] -0.56048 -0.23018  1.55871  0.07051  0.12929  1.71506  0.46092
##  [8] -1.26506 -0.68685 -0.44566
```

A Source code

Now we show all the code chunks:

```
library(knitr)
opts_chunk$set(echo = FALSE)  # hide source code in the document
# chunk a
1 + 1
# chunk b
2 + 2
# chunk c
rnorm(10)
```

Of course, you can select labels to include here, e.g. remove the first chunk:

```
# chunk a
1 + 1
# chunk b
2 + 2
# chunk c
rnorm(10)
```
